

## FTT-1

### Miniaturized device and Tester for fencing

The user can select the following three operation modes:

- Recording machine for the foil
- Recording machine for the sword
- Tester for the electric control of body cords and the 3 weapons

The low cost, the easy use and the multiple functions make it an indispensable device for every fencer.

### Recording machine for the foil

- FTT-1 is connected to the three-pin plug of all the body cords in order to use it with any kind of connector attached to the weapon.
- It is equipped with a special clip, which is easily fixed to the athlete's clothing close to the output of the body cord (a small pocket, belt, etc.).
- It signals every time the point of the weapon is pressed, even if this occurs on non-valid targets.
- It signals the hit only if the contact time of the tip is compliant with the FIE regulations, thus guaranteeing a correct execution.
- It is ideal for training because it makes reels, pistes, cables and signalling units superfluous.
- It consents to select 3 kinds of sonorous signalling:
  - Two of the signals last for 1 second and have different tonalities that distinguish the hits of the two competitors,
  - A third signal has a short duration of 0,15 seconds in order to recognize hits made in rapid succession during training.

### Recording machine for the sword

- FTT-1 has all the characteristics listed for signalling foil hits; the contact times of tip are compliant to the FIE regulations for swords.

### Tester for the electric control of the body cords and the 3 weapons

- The tester verifies the electric conductance of the circuits on the 3 weapons and on all kinds of body cords.
- The micro interruptions of the circuits are signalled both visually and audibly even when they last a thousandth of a second; in this manner uncertain contacts or brief connections during the movement of the cables can be identified.

### GENERAL CHARACTERISTICS

- Automatic turn off: after 5 minutes of inactivity.
- Automatic reactivation: at the first recorded event.
- Standard battery, included: 12V type A23.
- Extremely reduced dimensions: 7, 6x4, 8x1,6cm
- Super light: 60g

The company reserves the rights to modify these characteristics without forewarning.
